EBARA INTERNATIONAL CORPORATION, CRYOGENICS DIVISION, COMPLETES SHIPMENT OF 5000TH PUMP

Sparks Nevada, USA 1/26/2010

After 36 years of producing submerged electric motor cryogenic pumps for land and marine based applications, Ebara International, Cryodynamics Division recently reached the remarkable milestone of shipping its 5000th pump. "This is a substantial achievement considering the relative few applications for cryogenic pumps and the fact that some of them exceed 3000 HP" states David Cameron, Vice President, Business Development, Ebara International Corp.

Ebara Cryodynamics is proud to be recognized as the foremost producer of submersible pumps and turbine expanders for the ever – growing LNG and liquefied gas industries and is represented at the vast majority of LNG operations in liquefaction, marine transport and re-gasification applications. www.ebaraintl.com
